SUMMARY

Computer Science undergraduate specializing in **AI/ML** with core technical foundations in **C++**, **SQL**, and deep expertise in **Generative AI & Agentic AI**. Open-source creator with a proven track record of architecting user-friendly developer tools and commercial platforms used by thousands of global users. Skilled at translating complex technical requirements into practical, reliable, and high-performance software products.

EDUCATION

Bachelor of Technology in Computer Science and Engineering, Jagran Lakecity University Expected 2027
Specialization: Artificial Intelligence & Machine Learning (AI/ML) Coursework: DSA, OOP, DBMS, OS, Networks

SKILLS

Programming Languages	C++, Python, SQL (PostgreSQL, MySQL)
Generative & Agentic AI	Generative AI, Agentic AI, Autonomous Agents, Multi-LLM Routing, RAG, Prompt Engineering
Databases & Systems	Relational Database Design, SQL Query Optimization, System Design, Data Modeling
Tools & Environments	Git, GitHub, Linux, Docker, VS Code

WORK EXPERIENCE & PROJECTS

Founder and Lead Engineer Jan 2024 – Present
EPL – English Programming Language [GitHub](#) | [eplang.me](#)

- Created an open-source programming language that lets users write code using natural, plain English sentences, making programming accessible to beginners and achieving **4,000+ global downloads**.
- Shipped a complete developer ecosystem in C++ and Python, including an official VS Code extension with code assistance, a 22-package standard library, and comprehensive web documentation.
- Engineered an automated package registry, enabling developers to publish, manage, and install community libraries seamlessly.

Founder and Developer Jun 2024 – Present
NeuroShell – AI-Powered Plain English Terminal [GitHub](#)

- Developed an intelligent terminal shell (C++ & Python) that allows developers to run command-line tasks by simply typing what they want in plain English instead of memorizing cryptic shell syntax.
- Implemented an instant translation engine with multi-LLM support, along with a built-in 4-layer safety shield that catches and blocks destructive commands (like accidental system deletion) before execution.
- Shipped an official Visual Studio Code extension with 1-click terminal integration, enabling users to toggle instant AI translations.

Founder and Lead Architect Aug 2025 – Present
ASWorks – Digital Creator & Developer Marketplace [asworks.studio](#)

- Built and launched a commercial online marketplace ([asworks.studio](#)) where developers and creators can sell, buy, and instantly download verified software assets and web templates.
- Integrated secure online payment checkouts (Stripe and Razorpay) with automated invoice generation, and designed the backend database schema to reliably manage product listings and transactions.
- Implemented automated developer verification and instant download delivery, ensuring a trusted marketplace with zero manual delays.

Lead Developer 2025 – Present
Syting – Real-Time Social & Discovery Mobile Platform [Private Platform](#) | [Admin Center](#)

- Designed a cross-platform mobile application providing real-time chat, matchmaking, and privacy-first discovery features that protect user identity prior to mutual connection.
- Architected the backend database using **PostgreSQL (SQL)**, designing relational tables, automated security rules, and real-time messaging data channels for fast, responsive interactions.
- Built an administrative control center to monitor real-time platform activity, user reports, and data safety compliance.

HONORS & CERTIFICATIONS

- Open-Source Leadership:** Created and maintain EPL, scaling adoption to **4,000+ international developers**; published official tools on the VS Code Marketplace and package registries.
- Industry Certifications:** Anthropic Claude Code in Action (2026) · AWS EC2 Fundamentals (KodeKloud) · Cloud Computing Fundamentals (KodeKloud).
