ABNEESH SINGH

DevOps & Cloud Engineering Intern | CI/CD Pipelines, Docker, Cloud Deployment & Scripting
+91 8109523341 ◇ Bhopal, India ◇ singhabneesh250@gmail.com
linkedin.com/in/abneesh-singh001 ◇ github.com/abneeshsingh21 ◇ portfolio-landing-page-virid.vercel.app/devops

EDUCATION

Bachelor of Technology in Computer Science and Engineering Expected 2027
Jagran Lakecity University ◇ *Specialization: AI/ML* ◇ *Coursework: Operating Systems, Networks, DBMS, DSA, Linux/Unix*

TECHNICAL SKILLS

DevOps & CI/CD: GitHub Actions, Multi-Stage CI/CD, Matrix Builds, Automated Testing Gates, OIDC Trusted Publishing
Containers & Cloud: Docker, Multi-Stage Builds, Docker Compose, Azure Container Apps, Azure App Service, ACR, GHCR
Scripting & Automation: Python, Bash (Linux/Shell), PowerShell, Node.js, CLI Tools, Release Packaging Automation
Infrastructure Concepts: Kubernetes YAML/Manifest Generation, Cloud Fundamentals, Linux Fundamentals
Databases & Tooling: PostgreSQL, MongoDB, SQLite, Git, GitHub, Linux (Ubuntu/Debian), VS Code, Playwright

DEVOPS & CLOUD ENGINEERING PROJECTS

EPL – Continuous Delivery, Containerization & Multi-Cloud Tooling Jan 2024 – Present
Open-Source Language Runtime & Deployment Ecosystem *GitHub* | *eplang.me*

- Architected automated GitHub Actions CI/CD workflows featuring multi-OS matrix test suites (Ubuntu, macOS, Windows), Ruff linting, pinned Action SHAs, and least-privilege token access (`contents: read`).
- Automated containerized deployment to **Azure Container Apps** via Azure CLI and ACR, paired with tag-triggered OIDC trusted PyPI releases and live **Azure App Service** deployments with HTTP health probing.
- Built Python deployment tooling to generate Kubernetes Namespace, ConfigMap, Deployment, Service, Ingress, and HPA manifests, with validation of deployment parameters.

NeuroShell – Automated Multi-Platform CI/CD & Hardened Docker Images Jun 2024 – Present
Cross-Platform Native Runtime & Reliability Testing Suite *GitHub*

- Configured cross-platform CI matrix pipelines running CMake builds, CTest execution, and Linux memory sanitizers (ASan), complemented by scheduled nightly soak workflows and automated chaos fault injection.
- Authored multi-stage Dockerfiles separating build dependencies from production runtimes on `python:3.12-slim`, enforcing non-root user execution (`useradd`) and restrictive file ownership permissions.
- Built automated Python release tooling that calculates SHA-256 artifact checksums and packages platform distribution bundles.

Syting – Database Migration CI Pipeline & Containerized Verification Aug 2025 – Present
Automated PostgreSQL Validation Harness & Mobile Infrastructure *GitHub*

- Developed a Bash validation harness (`verify_sql.sh`) that provisions an ephemeral PostgreSQL 17 container, waits for database readiness, and applies 89 SQL migration files sequentially.
- Integrated SQL migration and Row-Level Security checks into GitHub Actions, using an EXIT trap to clean up the temporary database container.

ASWorks – Containerized Integration Testing & Azure Deployment Packaging Aug 2025 – Present
Cloud-Deployed Digital Asset Marketplace *asworks.studio*

- Configured GitHub Actions CI with MongoDB 7 service containers and health checks, alongside automated unit, integration, and Playwright end-to-end testing.
- Built deployment packaging scripts (`package-deploy.mjs`) for **Azure App Service**, structuring Next.js standalone bundles and validating deployment archive paths to catch packaging errors that could cause production 404s.

CERTIFICATIONS & CREDENTIALS

KodeKloud: AWS EC2 Fundamentals, Cloud Computing Fundamentals ◇ **Anthropic**: Claude Code in Action (2026)
